

The industry standard in geospatial information solutions for almost 100 years.

IFS Tobin has been providing the energy and resources markets with innovative solutions and accurate geospatial and attribute data for nearly a century, allowing users to maintain enterprise datasets and leverage business intelligence and geological analyses to support critical decision making.

## Key product facts

1. IFS Tobin's grid is the foundation of the IFS Tobin product family offering the most comprehensive, continuous grid/survey coverage in the industry with 1.8 billion acres, 75,000 townships, and 300,000 original Texas abstracts.
2. IFS Tobin's wells provide surface and bottom hole location and header information for the complete life cycle of the well. Coverage includes coordinates and attribution for over 4.3 mil surface hole and 4.4 mil bottom hole locations in 35 states plus Gulf of Mexico state and federal waters and California offshore.
3. IFS Tobin's lease activity points give users insight into the most up-to-date county-sourced leasing information available in parts of 14 states before mapped fee lease polygons are released.
4. IFS Tobin's fee lease polygons help users accurately see where competitors are leasing or where new opportunities may exist in parts of 14 states. IFS Tobin's federal lease polygons help complete the leasing picture in the western United States.

## Improved efficiencies

- Spatially accurate data built with almost 100 years of industry experience
- Customizable data access via IFS Tobin REST API
- Updates to well and lease information posted 2X daily

## Greater value

- Complete clarity around well, lease, and land activity
- Perspective into competition and state of the market
- Cross-functional usage: land departments, business development, geology, GIS analysts, and geotechs

## Benefits

**Delivers** a wide range of geospatial and attribute data built on an almost 100-year history of information quality focused on providing data our customers can depend on to make well-informed business decisions with confidence

**Enables** users to gain a competitive advantage by integrating well, fee lease, and pooling unit data to identify potential areas of open acreage or joint venture opportunities

**Provides** users access to data content, analytics, and data integration methodologies through strong partnerships with other industry leaders

**Offers** a unique vantage point into our customer-driven roadmap focused on embracing new technologies, continually improving information quality, expanding existing coverage areas, improving delivery methodologies, and adding new layers and solutions

**Streamlines** data ingestion workflows with IFS Tobin REST API allowing users the ability to programmatically access the most current data available as they need it

**Furnishes** enterprise-wide solutions all teams can access when needed, enabling users across the organization to have a clear vision of their competitive landscape

# IFS Tobin

## IFS Tobin All Access (TAA)

Addresses the challenges of acquiring dependable enterprise-wide geospatial and attribute information that meets the specific needs of the energy and resources markets in a cost-effective way.

### Features

- Built on IFS Tobin's trusted history of almost 100 years
- Subscription license provides the data you need, when and how you need it
- Before release, geospatial data and attribute information clears established business rules and is mapped and/or reviewed by GIS analysts ensuring information quality
- Aliased names, including operators and lessees, have been added to our attribution to help with searches and analytics
- Most current geospatial and attribute data at your fingertips including twice daily updates for wells and lease activity points/fee lease polygons
- Accessible through the web-based IFS Tobin Data Portal or IFS Tobin REST API
- Standardized formats available to integrate into multiple applications
- Access to IFS Tobin customer support

## TAA Basic Data Layers

- Grid includes Grid/Survey, Lots and Tracts, BLM Survey, State Lines, County Lines, Culture, and Texas Rural Subdivisions
- Wells (surface and bottom hole location and header information)
- Lease includes Lease Activity (points), Fee Lease (polygons), and Federal Lease (polygons)
- Surface Ownership

## TAA Plus Data Layers

- **Pooling Units** – Allows users to track unitization activity for units or pooling areas recorded at the county level. Currently available in the Permian Basin plus 18 counties in east and south Texas
