

IFS Energy and Resources solutions are expertly designed to help you optimize processes and maximize your overall performance. From the field to the back office and beyond, our solutions empower you to streamline workflows, automate business processes, lower operating expenses, and maximize asset value.

Discover the power of IFS Energy and Resources solutions and embrace transformation through automation.

Production Operations

Integrated production software that optimizes asset performance for over 50% of wells in the U.S. and thousands of others worldwide. Allows for accurate volume allocations, effective field data capture and validation, real-time data visualization, event and alert monitoring, and seamless shift handovers.

Oil & Gas Accounting

Upstream oil and gas accounting software that is designed to simplify complex accounting and provide a 360° view into your company's financial performance. Our software is battle tested to handle the unique needs of revenue allocation and joint venture accounting.

Land Management

Upstream oil and gas land management software that boasts interactive mapping, streamlined lease acquisitions, automated recommendation processes, and one-click data analysis. Our land solutions manage the entire workflow from title management to lease acquisition to land administration.

Geospatial Information Solutions

Intelligent geospatial data and information solutions that, for decades, have allowed users to maintain enterprise datasets, enable geological analyses for asset evaluation, make critical land & lease decisions with ease, and gain visibility into future opportunities.

Canadian Oil and Gas

Best-in-class land, financial, and production accounting applications provide an unparalleled solution that allows Canadian customers to do more with less.

Mining

Production software for operations management – mining, metals, and minerals. Our integrated solution leverages data from across the entire operation, enabling facility optimization and maximizing the effectiveness of supply chains from the pit to the port.

Enterprise Asset Management

Enterprise Asset Management software that helps to optimize the management of your assets, control asset maintenance, and enhance asset performance from cradle to grave.

Enterprise Resource Planning (ERP)

Enterprise Resource Planning software to plan, manage, and enhance global business operations with software capabilities for projects, supply chain, procurement, HR and more. Get a clear, unified view to enable greater operational control and efficiencies.
